

205th Channel Reconstruction Proposed Project – Solution (2017)

- ▲ Make it look similar to the previous project.
- ▲ Armor steep banks with rock; add rock cascade to control elevation change; establish low flow channel; native plantings.
- ▲ Selective Tree removal to open up the canopy and allow vegetation to establish on the banks of the creek
- ▲ Additional tree removal to allow equipment access for construction
- ▲ More to come...

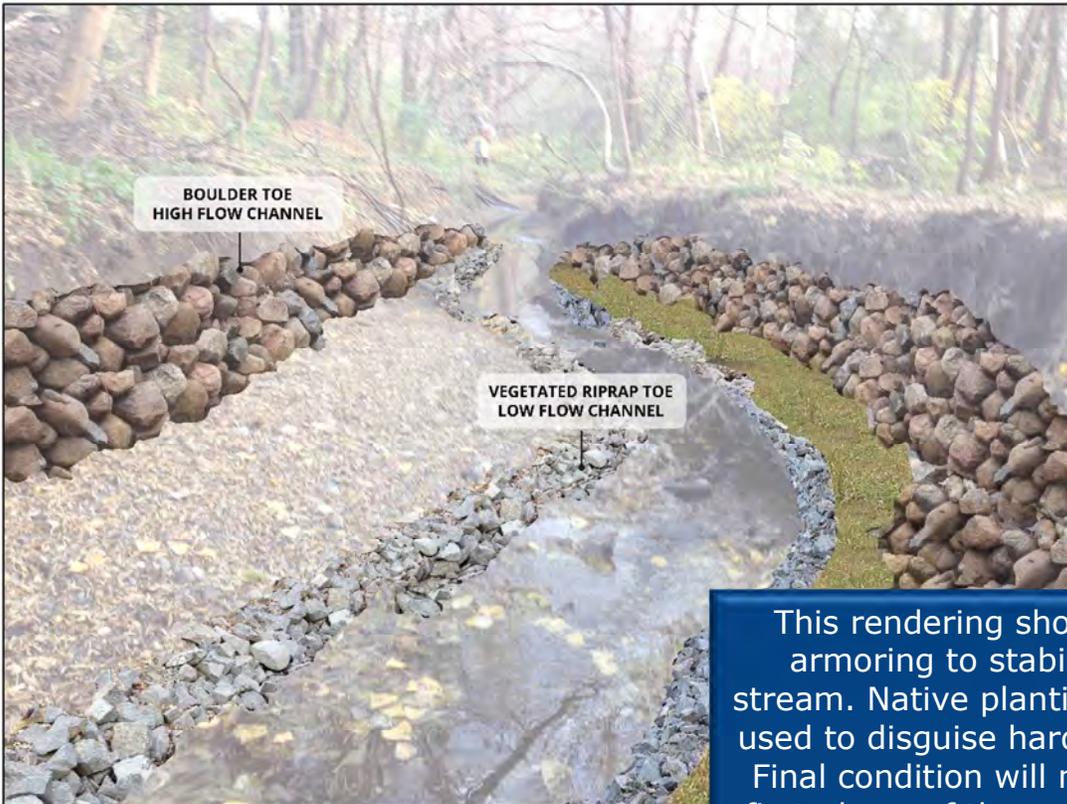

Completed Phase 1 Project
Current Conditions

project drawing

Existing Conditions and Proposed Project

This rendering shows hard armoring to stabilize the stream. Native plantings will be used to disguise hard features. Final condition will match the first phase of the project after establishment.
