

205th Street Drainage Channel Project (Phase 2) Improvement Project Open House

**Wednesday, Nov. 16
5:00PM – 6:30PM**

*Lakeville Water Treatment Facility
18400 Ipava Ave.*

PROJECT BACKGROUND

In 2009, the City of Lakeville, along with the Vermillion River Watershed Joint Powers Organization (VRWJPO), completed a project (Phase 1) to stabilize a drainage channel that discharges to Lake Marion. The project was located north of 205th Street, northwest of Jupiter Way and southeast of Kensington Way (Figure 1).

A field inspection of the drainage channel was completed in 2015 to survey the condition of the project and to evaluate the condition of the downstream drainage channel. The field inspection identified that the drainage channel downstream of Phase 1 is experiencing erosion following rain events and would benefit from similar stabilization improvements.

The City is currently in the design phase of a channel stabilization project that will tie into the Phase 1 drainage channel improvements and continue downstream. Field survey and tree inventories were completed for the project area in October and preliminary designs are being developed. The project is a joint partnership between the City of Lakeville and the VRWJPO.

OPEN HOUSE DETAILS

At the open house we will provide:

- Overview of the Project and how it relates to your property
- Project information including the proposed stabilization techniques
- Preliminary designs

City staff will be on hand to explain the Project, to gather feedback, and answer questions.

No formal presentation is planned, so please stop by anytime during the scheduled time.

PROJECT CONTACTS

We hope you are available to join us on November 16th. If you have any questions or comments for the project team prior to the meeting or are unable to attend, please contact the City of Lakeville: Mac Cafferty at mcafferty@lakevillemn.gov or (952) 985-4520.
